

Cantilever Racking

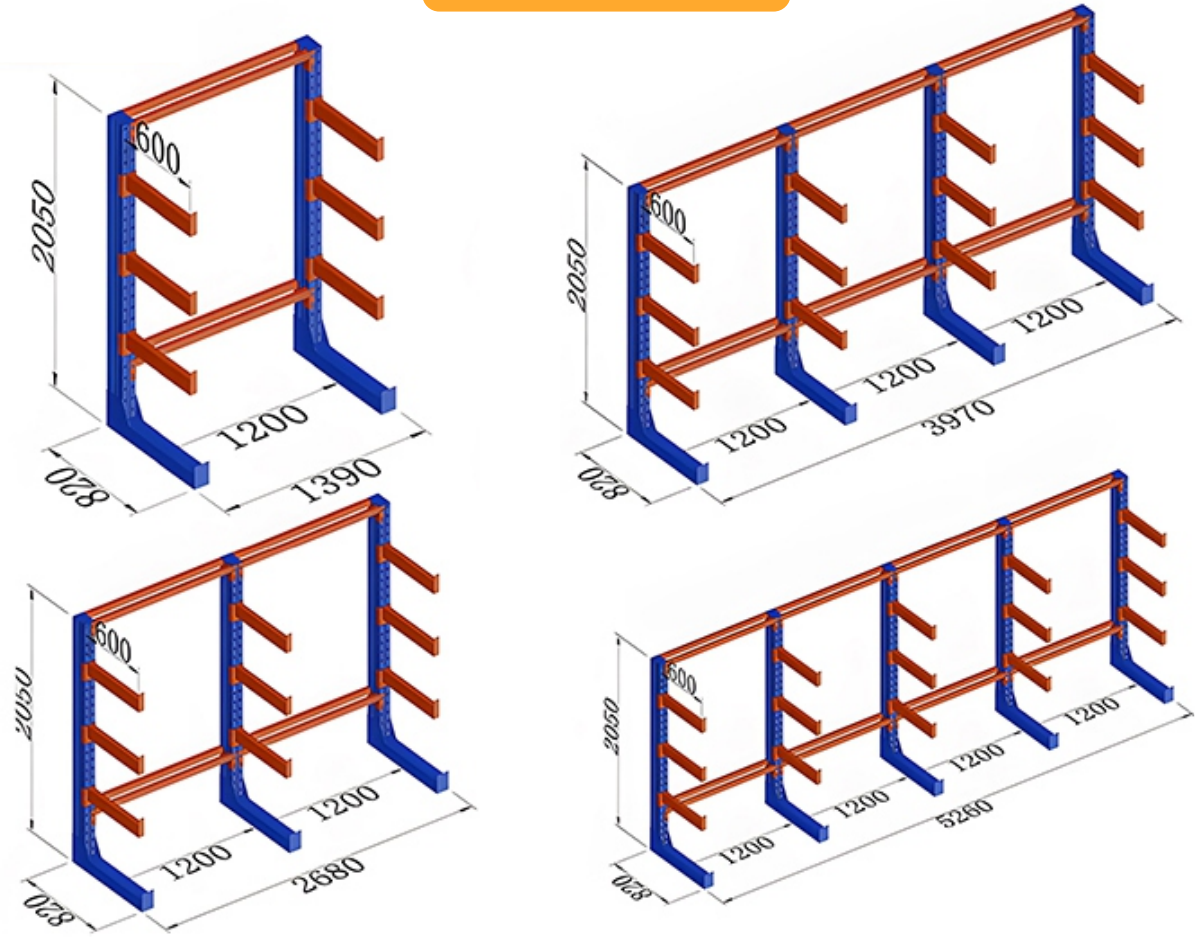

Cantilever shelf is one kind of special shelf structure composed of columns and cantilevers, which is mainly used to store long strips, plates, pipes and other irregular or long goods.

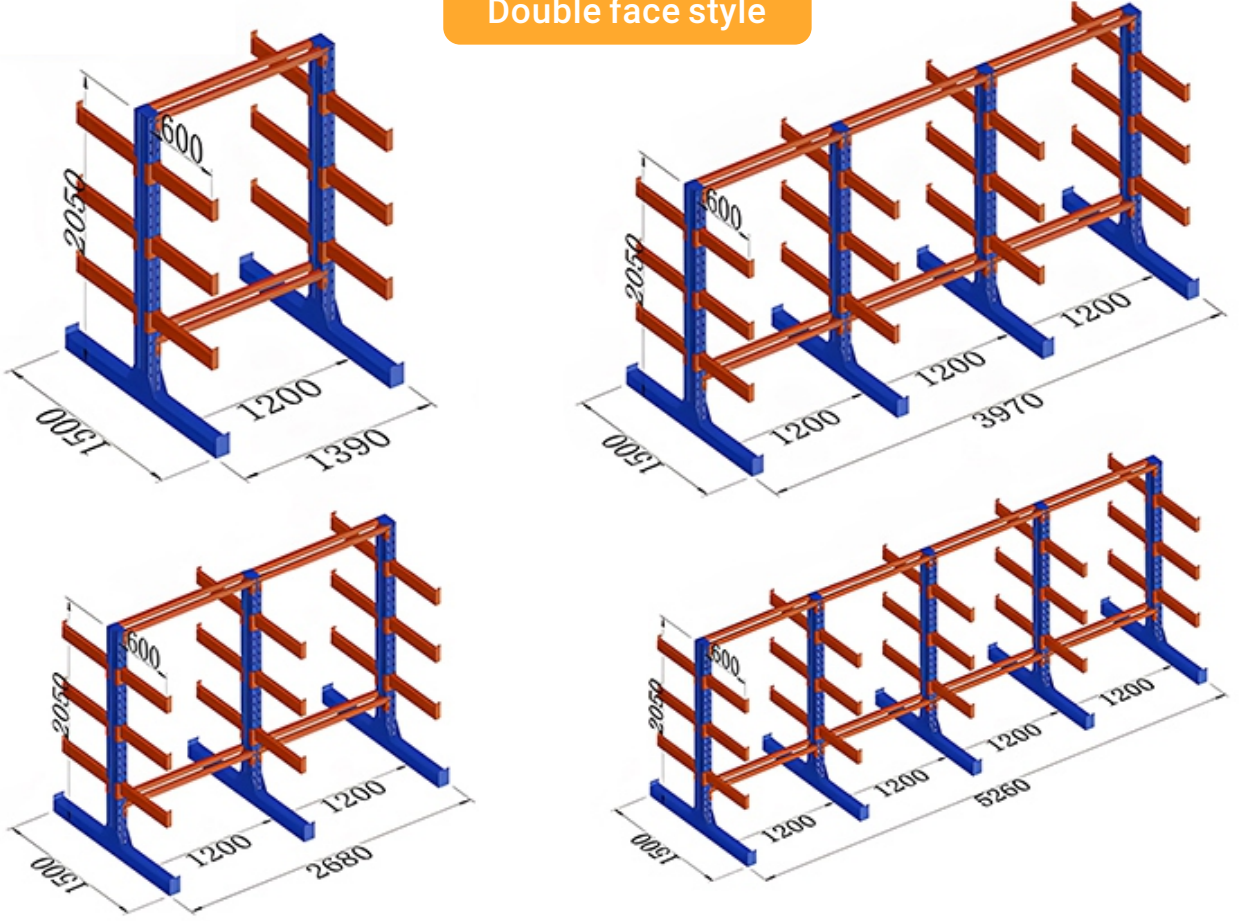

The cantilever shelf has the advantages of light structure, good load capacity and high space utilization. It can be flexibly designed and adjusted according to the characteristics and storage requirements of the goods, and adapt to different types and specifications of goods storage.

Brand Name	YIYI Warehousing	Surface	Electrostatic spraysurface
Place of Origin	Zhejiang, China	Thickness	Column:1.5mm,2.0mm
Material	High-quality steel	Product size	Customized
Product name	Cantilever Racking	Color	RAL System
Application Environment	Warehouse,Outdoors, Cold Room...	OEM&ODM	Support

Single face style

Double face style

1.Storage flexibility

The cantilever can be adjusted according to the length of the goods, which can adapt to the storage of goods of different lengths and make full use of the warehouse space.

2.Unique structure

The unique cantilever design enables the shelf to store goods on one or both sides, and the layout is flexible

3.Strong load capacity

Able to withstand heavy cargo, suitable for storage of heavy long goods
For example. when storing large steel beams, it can ensure the stability and safety of the shelf

4.Improve space utilization

Make full use of the vertical space of the warehouse and increase the storage capacity
For example, in higher warehouses, multi-layer cantilever shelves can be built to improve the efficiency of space utilization.
