

Stacking Racks Shelves

Stacking Racks are a flexible and cost-effective storage solution for a variety of storage environments with different needs. These racking systems usually consist of sturdy metal frames or pallets that can be stacked on top of each other to increase storage space. They are designed to store products that do not fit into traditional pallet racking or shelving units.

Can be used with a variety of shelves With tray function

- Durability : Able to withstand the wear and tear and stress of long-term use
- Stability : Designed to ensure stability when stacked, preventing tilting or collapsing
- Flexibility : The number of tiers and layout can be quickly adjusted as space and needs change
- Space saving : Stacked design maximizes the use of vertical space and reduces footprint
- Easy to assemble and disassemble : Can be easily assembled and reconfigured without complex tools
- Cost Effective : Lower initial cost compared to fixed shelving
- Versatility : Suitable for a wide range of storage needs, including tools, files, merchandise, etc
